

Junction boxes and cabinets TNCN

Stainless steel 316L for use in zone 1

The TNCN range comprises many standard sizes of enclosures manufactured in stainless steel 316L for maximum environmental protection.

The main box is manufactured from 1.5 / 2 mm sheet. Cable entries can be made on all sides or onto optional gland plates. Multiple boxes of same or different size may be flanged together as a compact unit. If your need is for a particular size or requirement, BARTEC AS also offers tailor made sizes and solutions.

The boxes are approved for intrinsically safe circuits and may also be combined as a connection box for flameproof applications. ATEX, IECEx, INMETRO and TR CU approved.

- Flexible product range with many standard sizes
- Custom size or design on request
- Wide drain flange design to avoid accumulation of water or debris
- Hinged with screws from size 20 x 20 cm
- Standard IP66, IP67 and IP68 ingress protection

Applications

The TNCN range of stainless steel 316L enclosures are designed for use in any environment where an explosive atmosphere may be present, and are especially recommended for chemical agent environments, seawater corrosion and extremes of low and high temperature.

Explosion protection

Marking ATEX	Ex e IIC T6/T5/T4 / Ex [ia] IIC T6 Gb Ex II 2 G EPL Gb
Certification ATEX	DNV-2008-OSL-ATEX-42438U DNV-2001-OSL-ATEX-0176X

Technical data

Material	Stainless steel 316L
IP/NEMA rating	IP 66 IP 67 IP 68 2m 0,5h IP 68 / NEMA 4X 8m 3h (on request)
Temperature	-50 °C to +40 °C (T5) -50 °C to +60 °C (T6/T4)
Cover gasket	Silicone (operating temp. -50 °C to +200 °C)
Surface treatment	Acid pickled
Material thickness	min. 1.5 mm
Earthing	Internal earth bar/bracket External earth bolt
Options	Quick locks, Gland plates, Multi Transit Conduit, Window, electro polished or painted surface

Calculating Terminal Box Heat Dissipation and Number of Terminals TNCN

An ignition temperature is the temperature at which a hot surface will cause an ignition to occur in a given atmosphere. Dependent on the type of gas or dust, the maximum temperature that any surface in the terminal box can reach without a spontaneous ignition is known as the 'T Class'. The maximum surface temperature must always be lower than the ignition temperature of the atmosphere in which it is used. The terminal boxes within the TNCN range has been assigned a maximum heat dissipation relating to the ambient temperature and T-Class. The TNCN range offers T6, T5 and T4 protection:

T4 = Maximum 135 °C (Internal wiring must have a temperature rating of at least 110 °C)

T6 = Maximum 85 °C

Theoretical values are calculated based upon typical configurations. Maximum power must not be exceeded in any given terminal box. Maximum current per terminal must be calculated using the Maximum Heat Dissipation. For some applications it may be necessary to have a variety of terminal sizes. The following tables and examples demonstrate how this is achieved. The power heat dissipation determines the maximum number of terminals permissible for any size of terminal box, based on a 100 % load. In example 2, the total load has exceeded the maximum 100 % value. Therefore, the required size and number of terminals cannot be fitted within this terminal box. If the load exceeds the maximum value simply select a larger size terminal box within the range and repeat the process until the total load value is within 100 % value.

Maximum heat dissipation

Type No.	Max. dissipated power at T _a = 40 °C
121009	6 W
151510	15 W
202012	20 W
202017	20 W
302017	30 W
282817	30 W
383817	40 W
575717	90 W

Example 1 (TNCN 282817A)

Terminal / conductor size (mm ²)	1.5	2.5	4	
Current (Amps)	10	16	20	
Number of terminals (of max. 33)	18	8	6	Total load
Load = 100 % maximum	54.54 %	24.24 %	18.18 %	96.96 %

Example 2 (TNCN 282822A)

Terminal / conductor size (mm ²)	1.5	2.5	4	
Current (Amps)	10	16	20	
Number of terminals (of max. 33)	18	8	6	Total load
Load = 100 % maximum	54.54 %	30.30 %	18.18 %	103.02 %

Typical Terminal Load Configuration

Note: In the shaded area you can add as many terminals as physically possible, provided the maximum load of 100 % is not exceeded. For loads on terminals below 4A, the quantity will be limited by the available space inside the box. There is no restriction in the numbers of terminals. The temperature class will then be T6 (85 °C). Care must be taken to ensure that the size of the chosen enclosure can accommodate the cable bending radius.

The table is a guidance for the maximum quantity of glands for installation in one face (the Width column in the table) on TNCN terminal boxes.

Note! Recommended quantity is 2/3 of guided quantity. MCT-frames can be fitted in boxes with a minimum depth of 20 cm.
